**University**

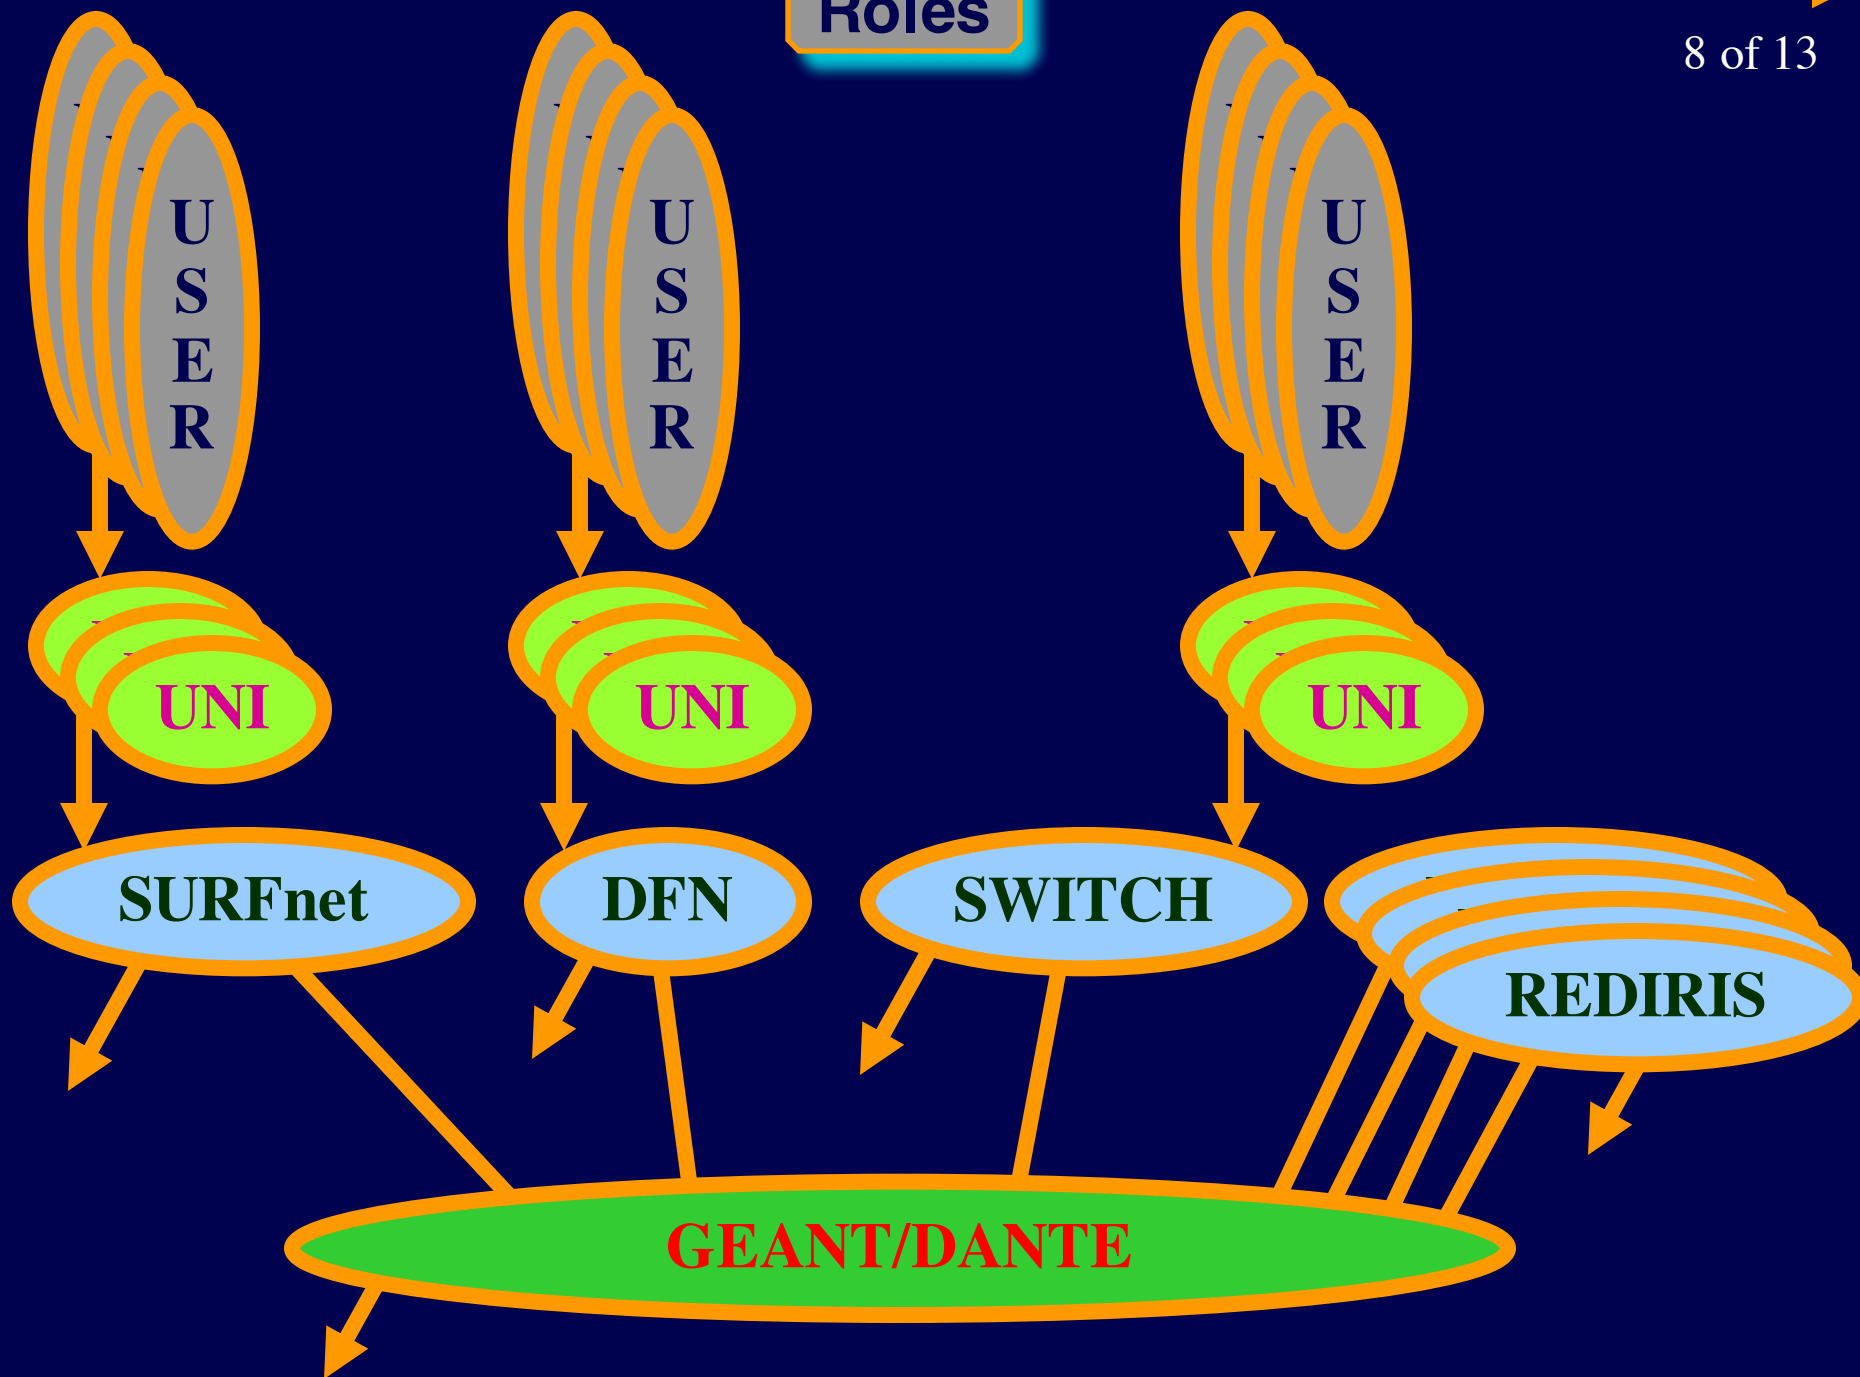

**Hogeschool**

**Library**

**NOB**

**SUREnet**

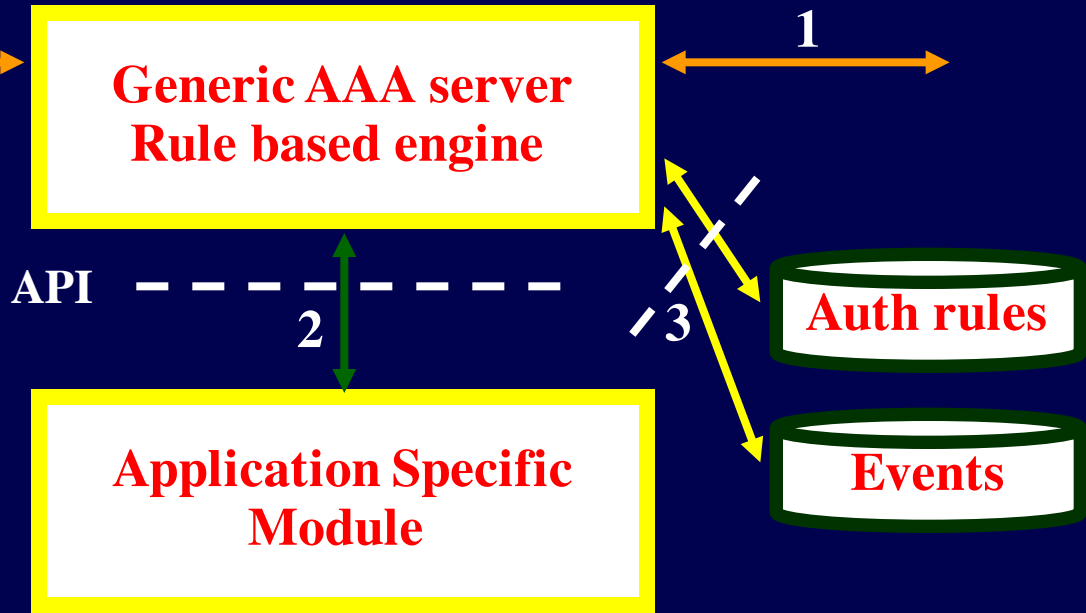

Rule example: Auth\_A = (B>9) .or. C .and. D

# USER

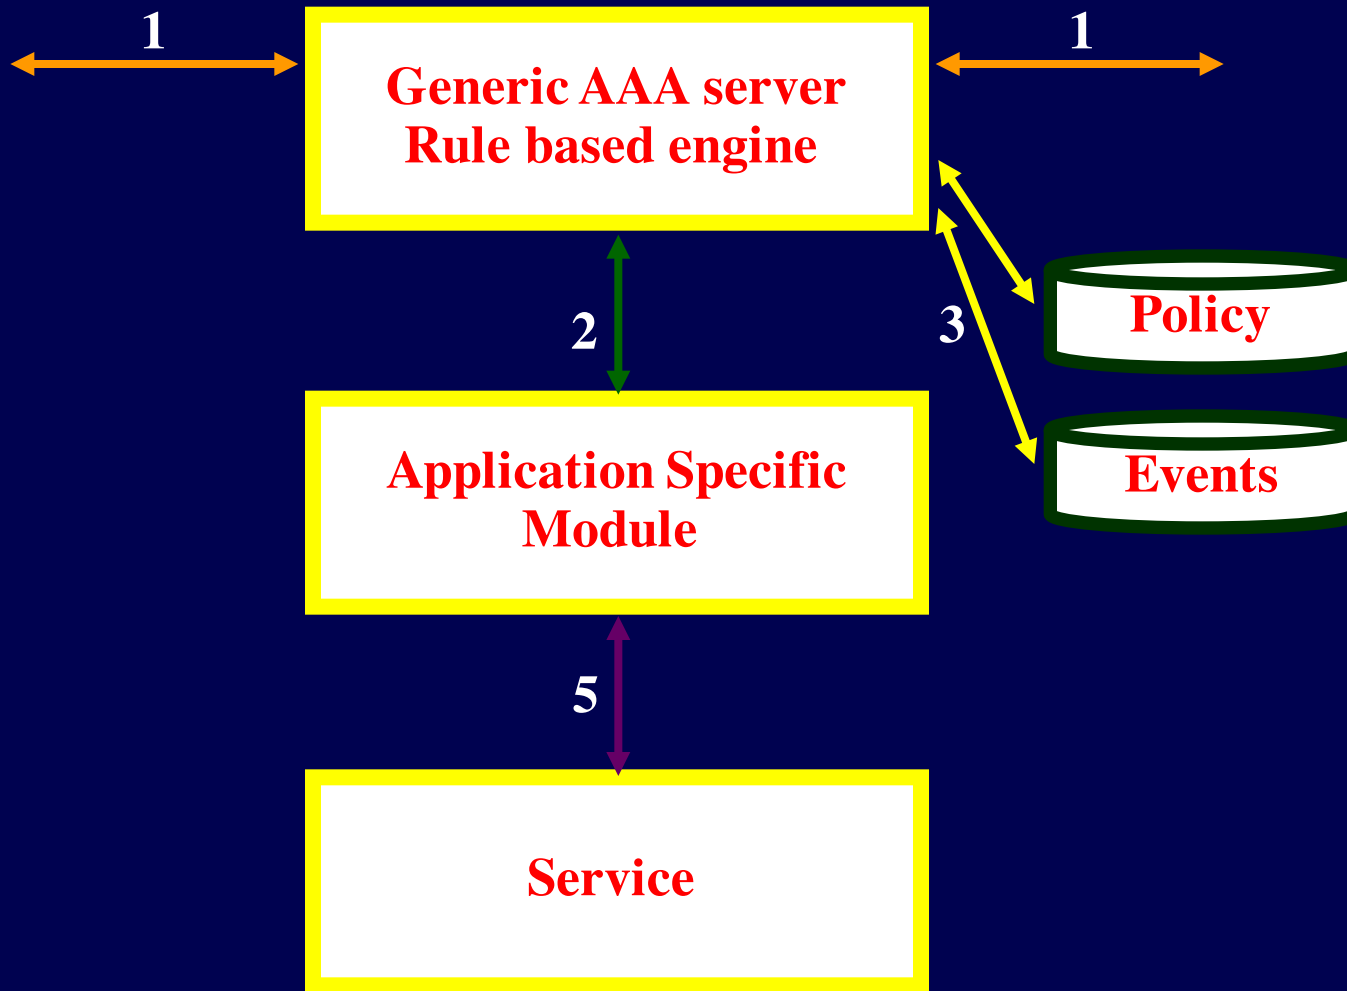

Types of communication:

**1: "The" AAA protocol**

**2: interface (API) to app specific module (addressing!)**

**3: interface (API or connection) to repositories (e.g. LDAP)**

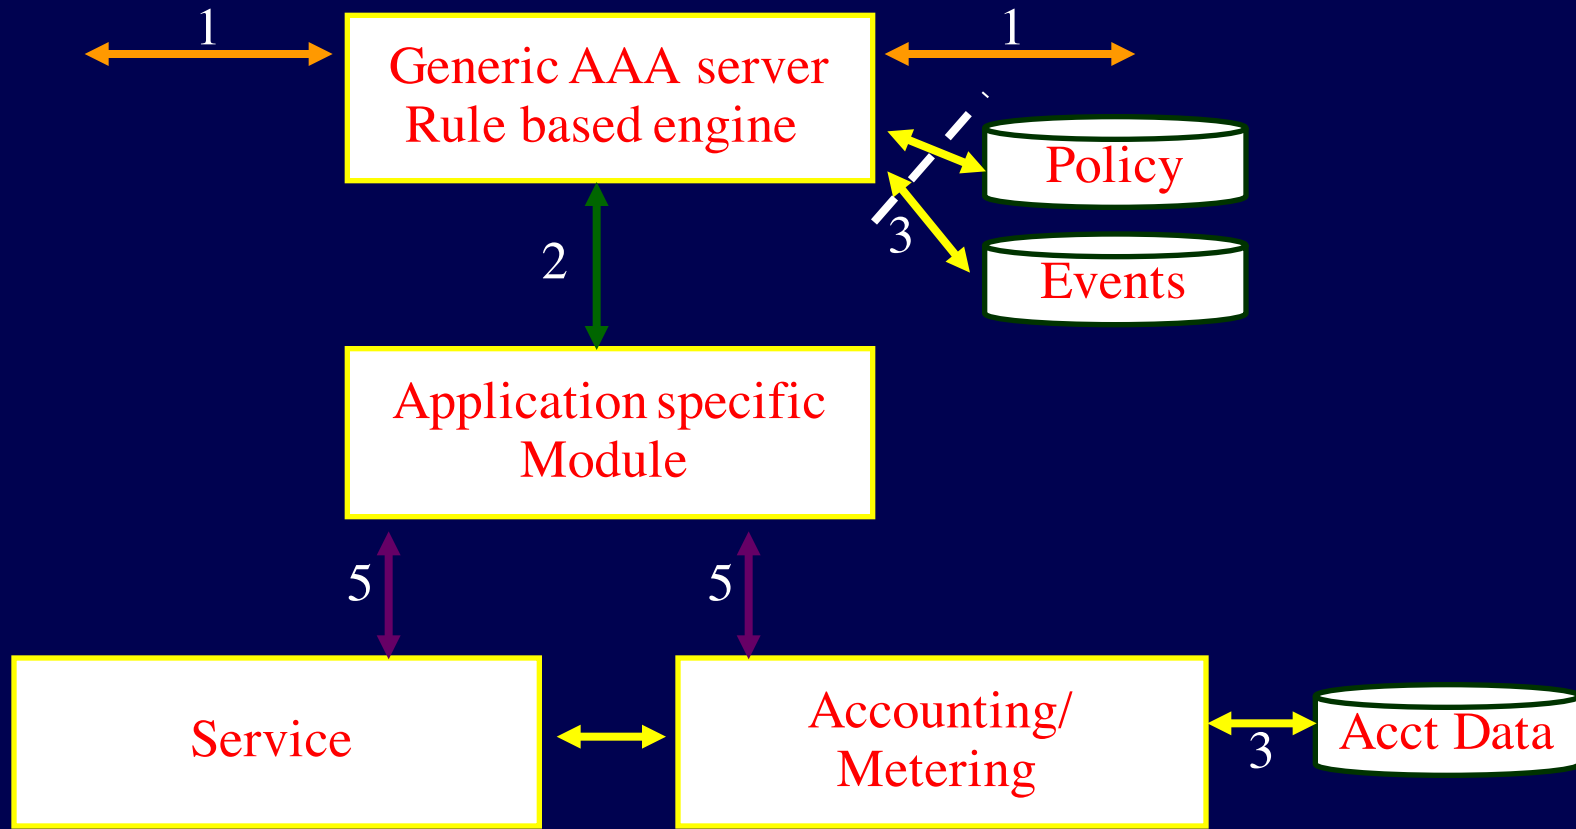

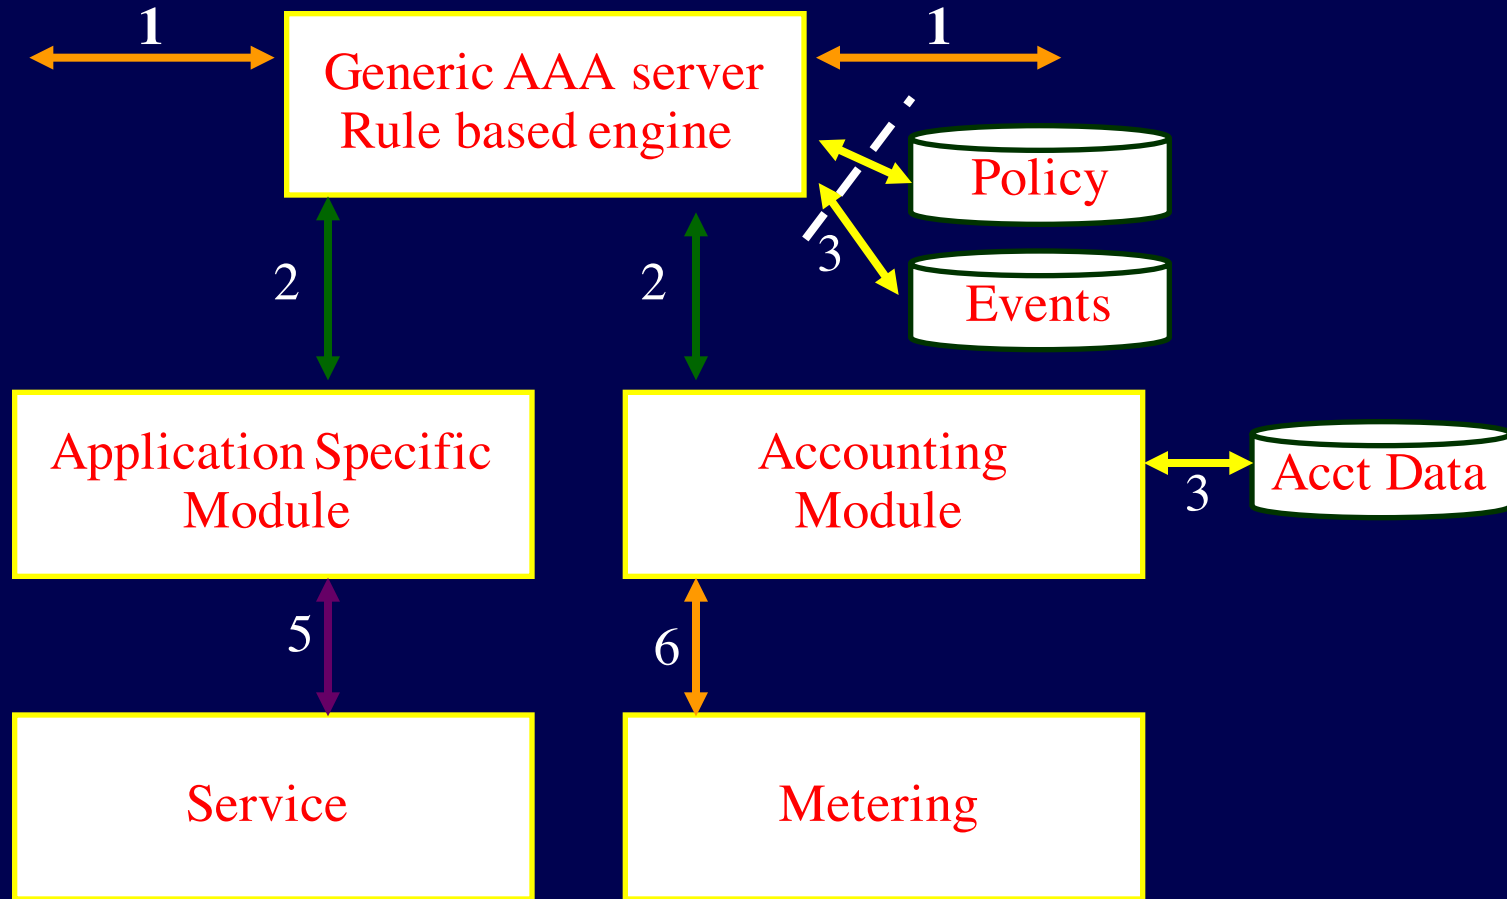

**Types of communication:**

**5: Towards service (f.e. COPS, CLI, SNMPv3)**

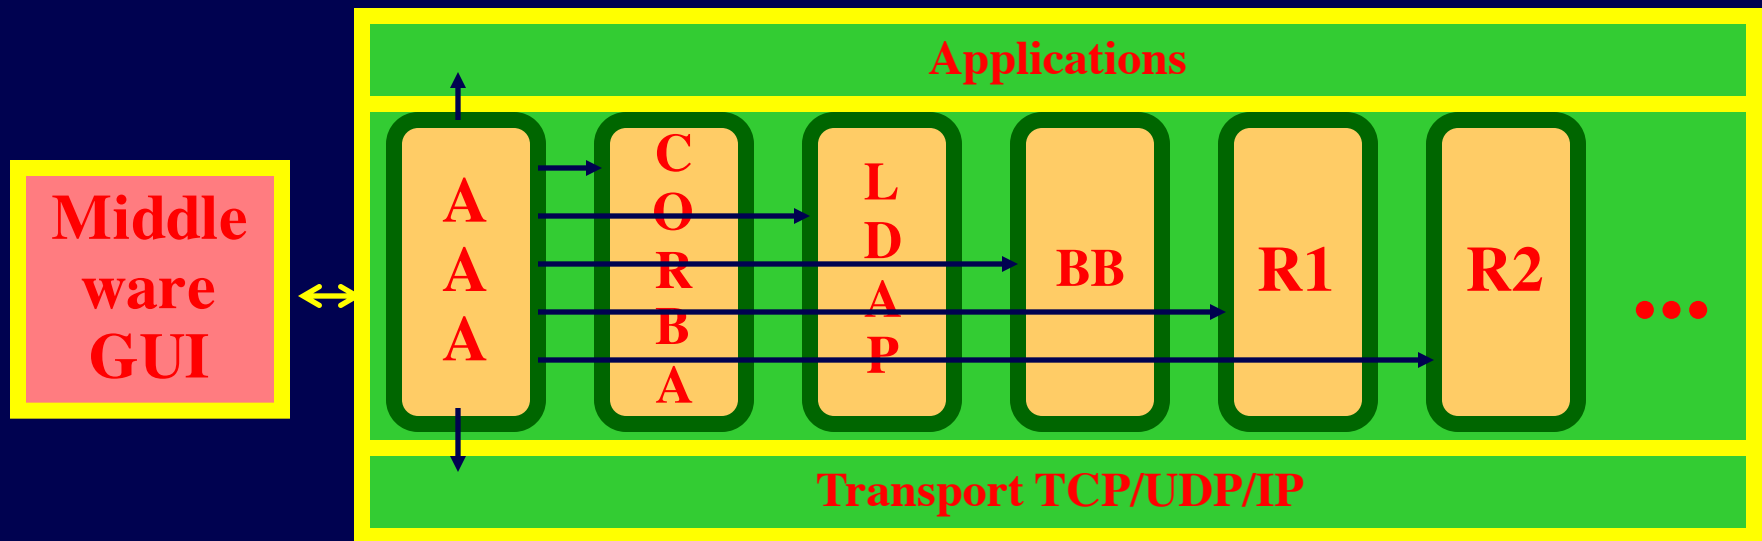

# AAA Server with Accounting as Part of the Service

# AAA Server with Accounting as Separate Service

- Resource discovery  $\leftrightarrow$  AAA discovery
- Is AAA high or low in middleware?
- All A's together or not?
- Should AAA be visible in the app or only stay in middleware and this way solve its user interface problem

# Stretching the OSI model

## **Specific goals of the RG are:**

- **develop generic AAA model by specifically including Authentication and Accounting**
- **develop audibility framework specification that allows the AAA system functions to be checked in a multi-organization environment**
- **develop a model that supports management of a "mesh" of interconnected AAA Servers**
- **define distributed policy framework, coordinate with policy framework WG and others**
- **develop an accounting model that allows authorization to define the type of accounting processing required for each session**

## Specific goals of the RG are:

- **implement a simulation model that allows experimentation with the the proposed architectural models (also work on an emulation)**
- **describe interdomain issues using generic model**
- **work with AAA WG to align short term AAA protocol requirements with long term requirements as much as possible**
- **complete the work in Q4 - 2000 (ambitious)**
- **RFC 2903 - 2907 !!!!**

- **Research Group Name: AAAARCH - RG**
- **Chair(s)**
  - John Vollbrecht -- jrv@merit.edu

- Use European research net as testbed for AAA
- VLL type of service
- Top-down
  - Application
  - Middleware - AAA
  - BB
  - Policy push
  - Diffserv
- Focus on techniques and products
- Concentrate on
- Authentication, aggregation
- Authorisation
- SLA - policy - metering - verification
- Simulation/emulation
