

# Testbeds to Prototype Tomorrows Digital World

Fabric Partner Description from UVA

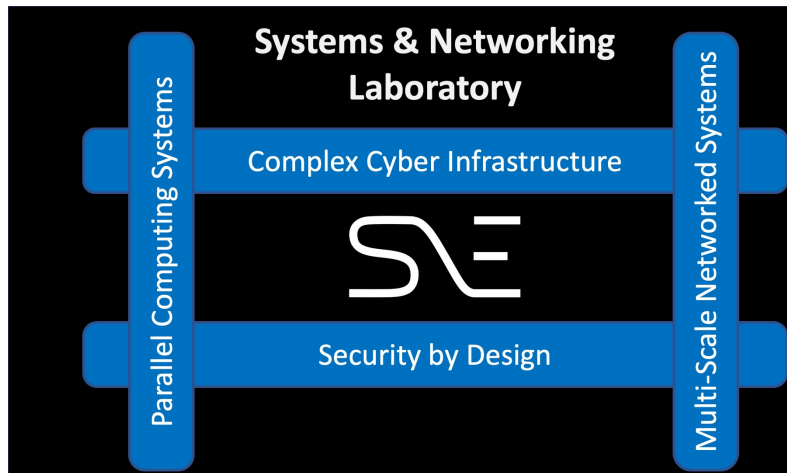

Paola Grosso, Joseph Hill, Chrysa Papagianni, Leon Gommans, Cees de Laat  
and many others!

Multiscale Networked Systems research group  
Complex Cyber Infrastructure research group  
University of Amsterdam

# Introduction

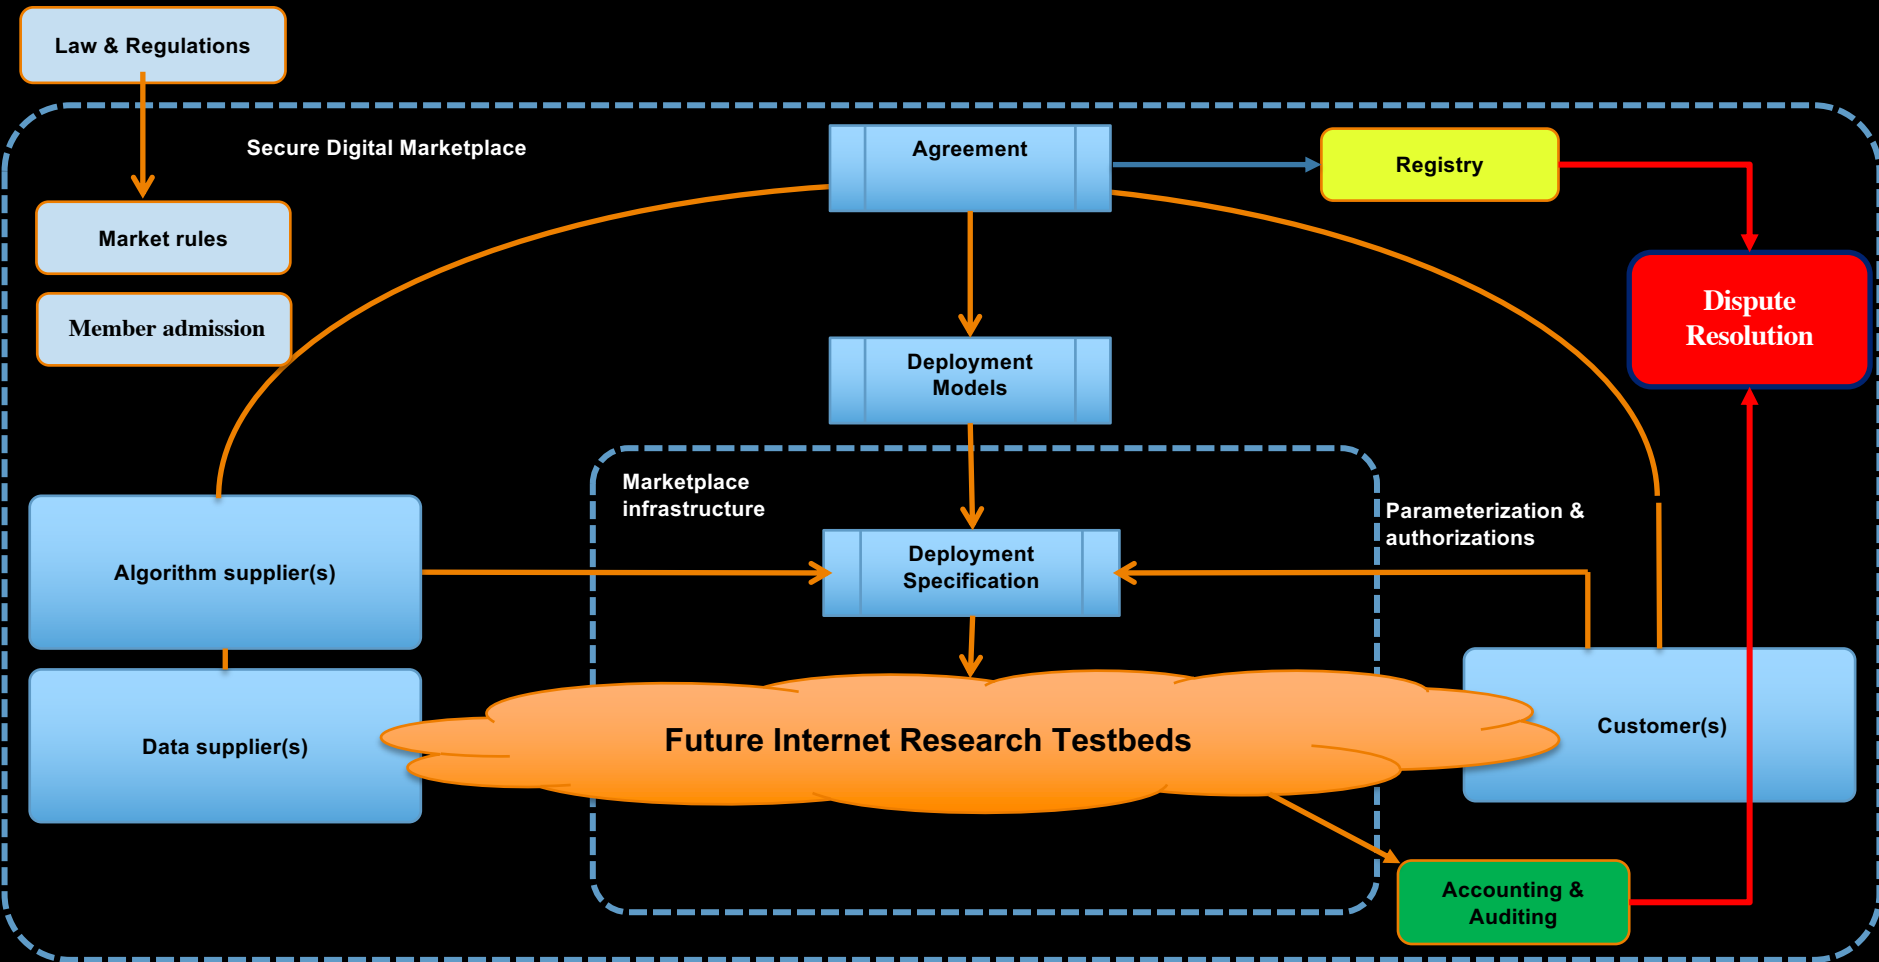

- The Systems and Networking Laboratory at the UvA conducts research on leading-edge computer systems of all scales, ranging from global-scale systems and networks to embedded devices. Across these scales our particular interest is on extra-functional properties such as performance, programmability, productivity, security, trust, sustainability and, last but not least, the societal impact of emerging systems-related technologies. We have four groups working together:
- Involved in Fabric related research
  - MNS
  - CCI
- Funded by a.o.:
  - Dutch Science Foundation
    - SecConNet, DL4LD, EPI, DAS6
  - EU
    - Slices-DS
  - UvA
    - DSC, AMDEX
  - AF-KLM, EQUINIX, TNO

# Scientific Achievement

- In our current projects we research methods to exchange data between parties that work together for a common goal but otherwise compete. The challenge is to keep control on data, algorithms so that it is only used for the agreed purposes.
- Applications are industrial / maintenance data, health records, smart city data
- The approach is to use modern computer science such as SDN, Virtualization, Encryption, Auditing, etc. to program agreements into the infrastructure.
- The different testbeds [FABRIC, 2STIC, BRIDGES, SLICES-DS, DAS6, PRP] that come together in Amsterdam enable us to research this next generation data aware Internet Exchange architecture & methods in our OpenLab.
- Building an outreach Industry Lab / testbed [AF/KLM, Equinix, Dell, Nokia, ...]

# Secure Digital Market Place Research

**AMDEX**

Data objects & methods  
Data & Algorithms service

**FAIR / USE**

**AMS-IX**

Routers - Internet – ISP's - Cloud  
IP packet service

**IP / BGP**

Layer 2 exchange service  
Ethernet frames

**ETH / ST**

# 2STIC

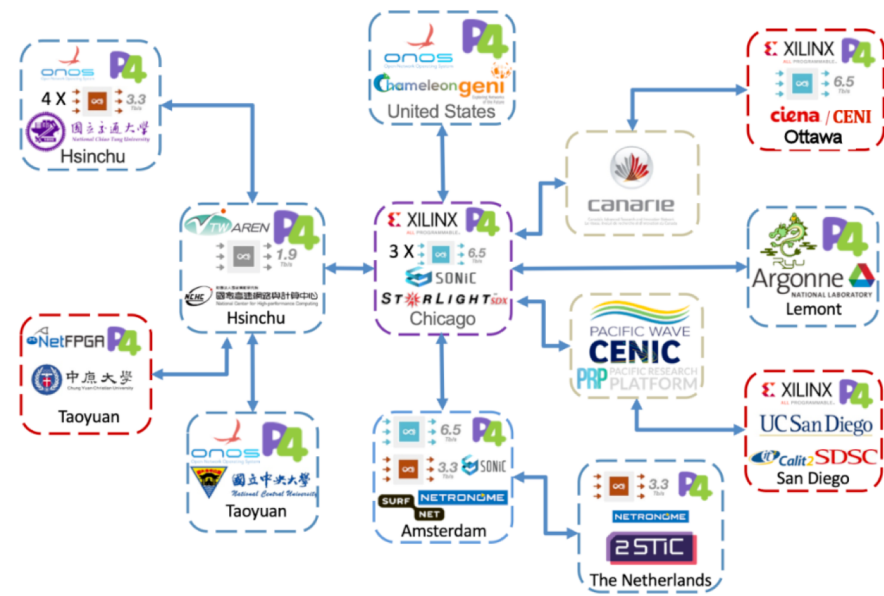

SECURITY, STABILITY  
AND TRANSPARENCY  
OF INTER-NETWORK  
COMMUNICATIONS

<https://www.2stic.nl/enabling-trust-in-network-services-through-secure-stable-and-transparent-internets.html>

2STiC testbed

High performance and large scale deployment to test novel protocols

# Cyber Infrastructure Challenge

- Building a Data Exchange / Digital Data Market that allows trustable exchange of data and algorithms while adhering to policy and law attached to the objects.
